

Executive Order #57

Progress Report

7/31/16

## **I. PREFACE**

Pursuant to Executive Order #57, the Open Data Council was created to establish and recommend standards and policies to the Department of Technology and Information (DTI) and other Executive Branch Agencies related to a statewide data strategy, open data and data sharing among state agencies.

The Council is required to provide a progress report by July 31, 2016 and a strategic plan for Statewide Integration of Open Data by September 30, 2016. This is the progress report to meet the executive order's requirement.

## **II. EXECUTIVE SUMMARY**

The Open Data Council was formed in February 2016 pursuant to Executive Order # 57. The Council has worked to procure and implement the Delaware Open Data Portal which will provide capabilities for citizens, researchers, entrepreneurs and others to search, view, analyze, filter, combine, and visualize data that is proactively published by state agencies and other branches of government. Configuration of the Open Data Portal is 98% complete. Datasets have been identified for inclusion in the launch of the portal. Work to prepare the datasets for publishing in the portal is underway and is expected to be completed by the end of August. The Council recommends that a launch event be planned to occur in mid-September with the Governor, CIO, Secretary of State and members of the Open Data Council.

## **III. OPEN DATA COUNCIL**

The Governor signed Executive Order (EO) #57 on January 27, 2016, which created the Open Data Council. The Executive Order specifically names DTI, Government Information Center (GIC), Health and Social Services (DHSS), Office of Management and Budget (OMB), Natural Resources and Environmental Control (DNREC), State (DOS), Services for Children, Youth and Their Families (Kids), Transportation (DelDOT), Education (DOE), and the Governor's Office.

After the EO signing, CIO James Collins requested designees from each Cabinet Secretary whose agency was named on the Council. CIO Collins designated Rhonda Lehman to serve as the Chair for the Council on his behalf. Dana Rohrbough of the Government Information Center serves as Co-Chair of the Council. The Council membership is shown below.

|                          |   |
|--------------------------|---|
| Rhonda Lehman, Chair     | Department of Technology and Information                      |
| Dana Rohrbough, Co-Chair | Delaware Government Information Center                        |
| Jill Fredel              | Department of Health and Social Services                      |
| Dean Stotler             | Office of Management and Budget                               |
| C.R. McLeod              | Department of State   |
| Robert Zimmerman         | Department of Natural Resources and Environmental Control     |
| Steven Yeatman           | Department of Services for Children, Youth and Their Families |
| Li Wen Lin               | Department of Transportation                                  |
| David Blowman            | Department of Education                                       |
| Meredith Tweedie         | The Office of the Governor                                    |

The Council has met five times since January 2016. All meetings are open to the public and are publicized in the Public Meeting Calendar. The initial meeting was kicked off by the Governor and CIO Collins. Council members were presented with an overview of open data and the tasks of the Council.

During the second meeting, the Council conducted a video conference with the Chief Data Officer of Connecticut to learn from their notable success with Open Data. The Council asked questions and learned quite a bit from Connecticut. Here are some of the notable things learned from Connecticut:

1. There should be a designee from each agency that will approve the publishing of data for that organization
2. Obtain and publish metadata for each dataset
3. The state doesn't look at data the same way consumers want to see it
4. Implement automation to keep datasets current
5. 30% of the traffic to their open data portal site is from CT state employees

The Council has been interested in learning from other states and local governments on best practices with Open Data. The Council Chair and co-Chair have talked with Chief Data Officer of the State of New York, and data officials from Maryland. The Council reviewed Open Data portals in other states, to better inform Delaware's decisions.

Discussions have been held with the local Delaware tech community. Dana Rohrbough with the Government Information Center recently spoke to the Open Data Meetup hosted by the Open Data Delaware organization about the state's open data efforts. In addition, the Open Data Delaware group organized Delaware's first National Civic Day of Hacking on June 4, 2016 where 50 participants in 10 teams worked the full day on challenges and developed prototypes to help solve civic problems.

Open Data Delaware is a very active organization with 330 members who hold Open Data Meetups and Open Hack Nights events every month. The community is eager to interact with the Open Data portal. The Chair and co-Chair have solicited input from this community about the types of data they would like to see included in the portal. This community is most interested in crime data, and at the local government they are interested in city parking data.

Ms. Rohrbough also spoke to the Delaware Coalition for Open Government to introduce the state's Open Data effort to their community as well.

We will continue to engage the civic tech community so that we can continually add desired and valuable data to the Open Data Portal.

The Open Data Council will continue to invite other state agencies and branches of government to participate in the Council and to submit datasets for publishing in the Open Data Portal.

The Government Information Center built a website for the Open Data Council, [opendatacouncil.delaware.gov](http://opendatacouncil.delaware.gov), which launched last month. The Council's website invites users to make suggestions for datasets. GIC will monitor the contact form on this website and will track, respond, and forward on suggestions to the appropriate agencies. There is also a Twitter account, @DataDelawareGov, <https://twitter.com/DataDelawareGov>, that will highlight and publish updates about Open Data in state government.

Below is a screenshot of the Open Data Council website:

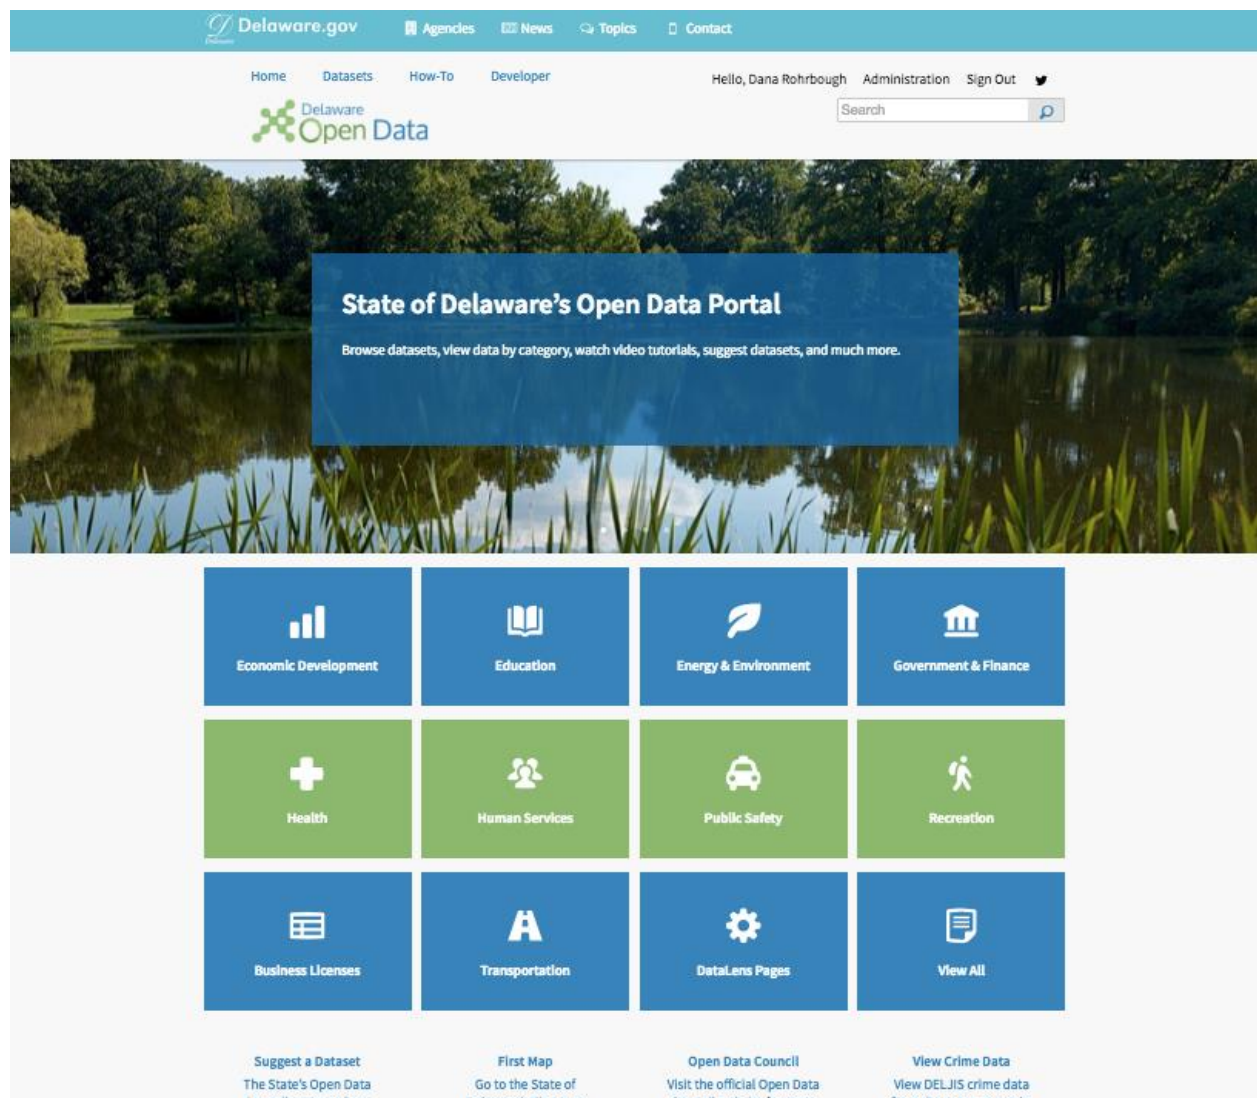

Governor Markell signed Executive Order 57 in January of 2016, establishing the Delaware Open Data Council that brings together a team from state government focused specifically on making more data available to members of the public. The Council is tasked with establishing a statewide data strategy and recommending standards and policies related to the posting of non-personally-identifiable public data.

## IV. OPEN DATA PORTAL

In April 2016, DTI and GIC procured the Open Data Portal software from [Socrata](#), a leading open data platform company. GIC is funding the base cost and launch for the Open Data Portal for the State which will give Delaware 150 licenses for datasets. Beyond 150 datasets, GIC and DTI will discuss options for funding with agencies.

Socrata assigned a project manager to work with Delaware on the configuration of the Delaware Open Data Portal. The configuration is 98% complete. Below is a screenshot of the home page of the portal:

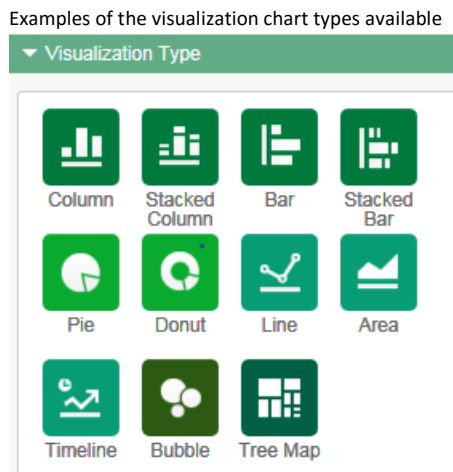

From the home page of the Open Data portal, there are tiles with categories of data that users can easily browse on the following topics:

- Economic Development
- Education
- Energy & Environment
- Government & Finance
- Health
- Human Services
- Public Safety
- Recreation
- Business Licensing
- Transportation

The homepage also has four featured articles where the state can choose to highlight specific datasets or link to related sites, such as [FirstMap](#). We are also encouraging users to tell us what they would like to see in the portal, through our "Suggest a Dataset" link.

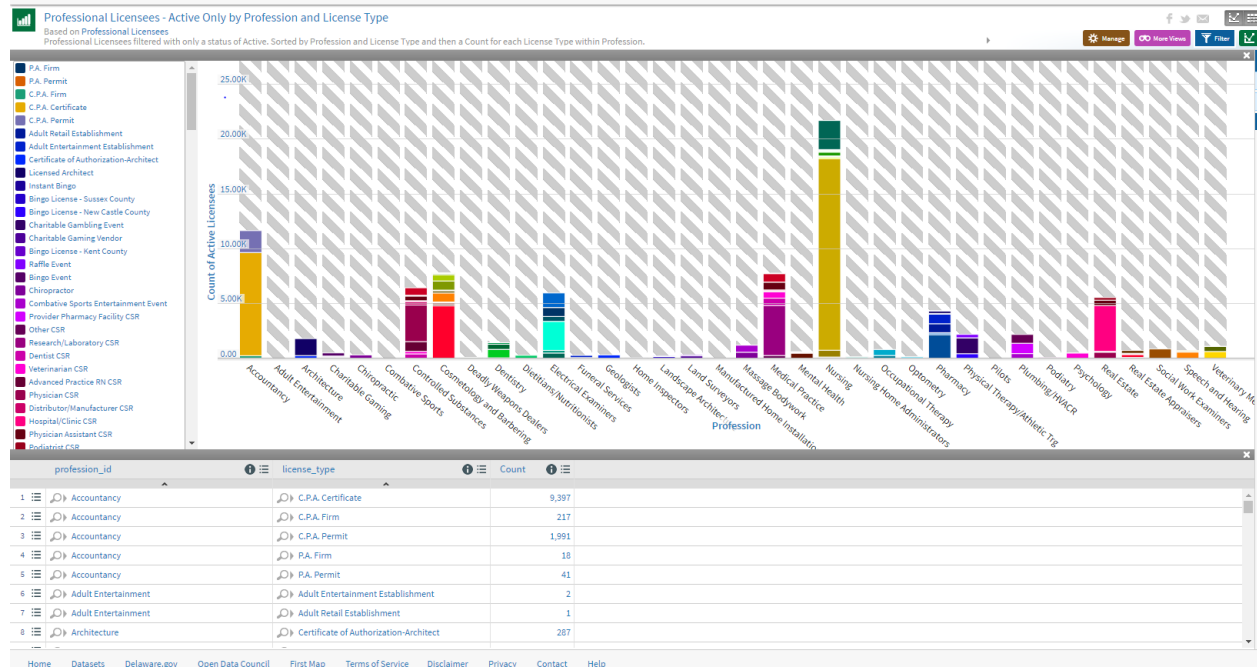

Users will have the ability to search for datasets by keywords or category. Any dataset can be viewed in a format similar to an Excel spreadsheet. Data can be sorted, filtered, summarized, and visualized in a number of different types of charts or maps.

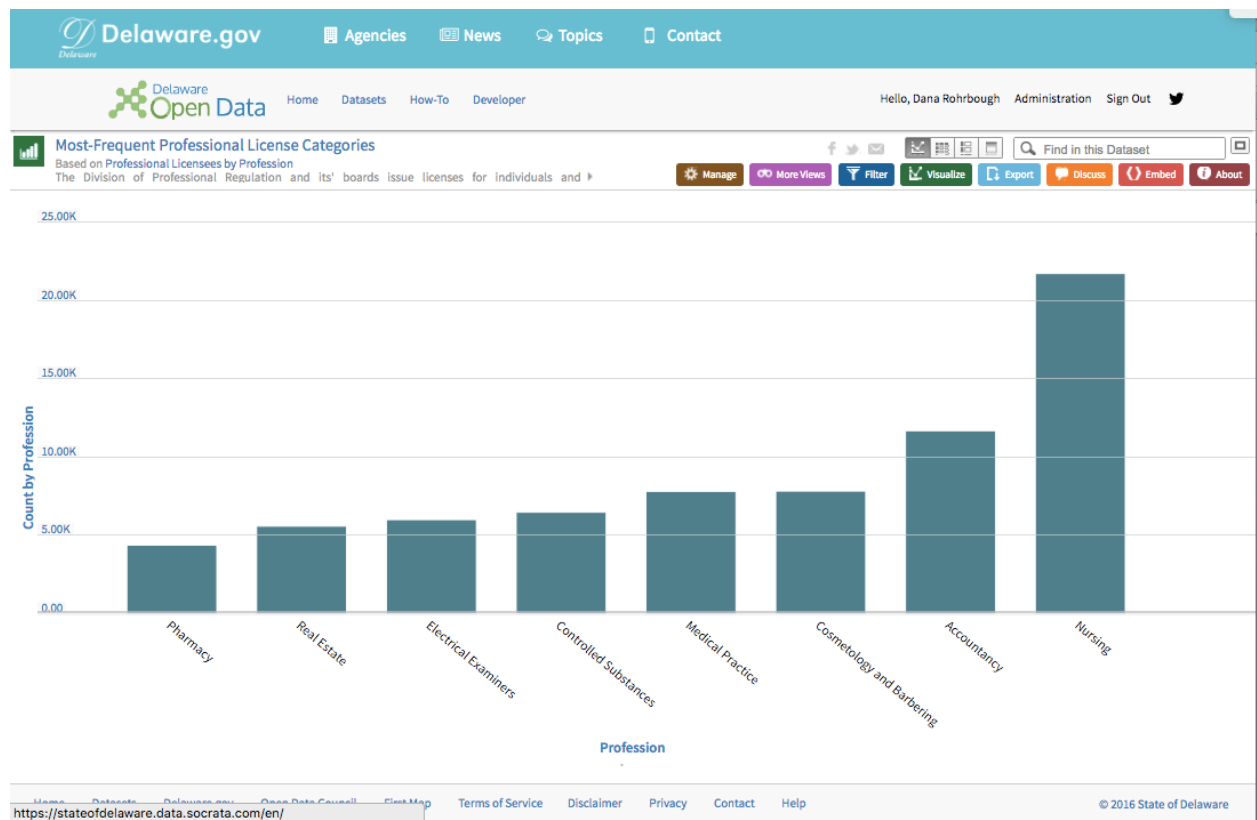

The following image shows an example of a stacked bar chart that was developed against the dataset for Professional Licensees.

## Delaware Open Data Progress Report 7/31/16

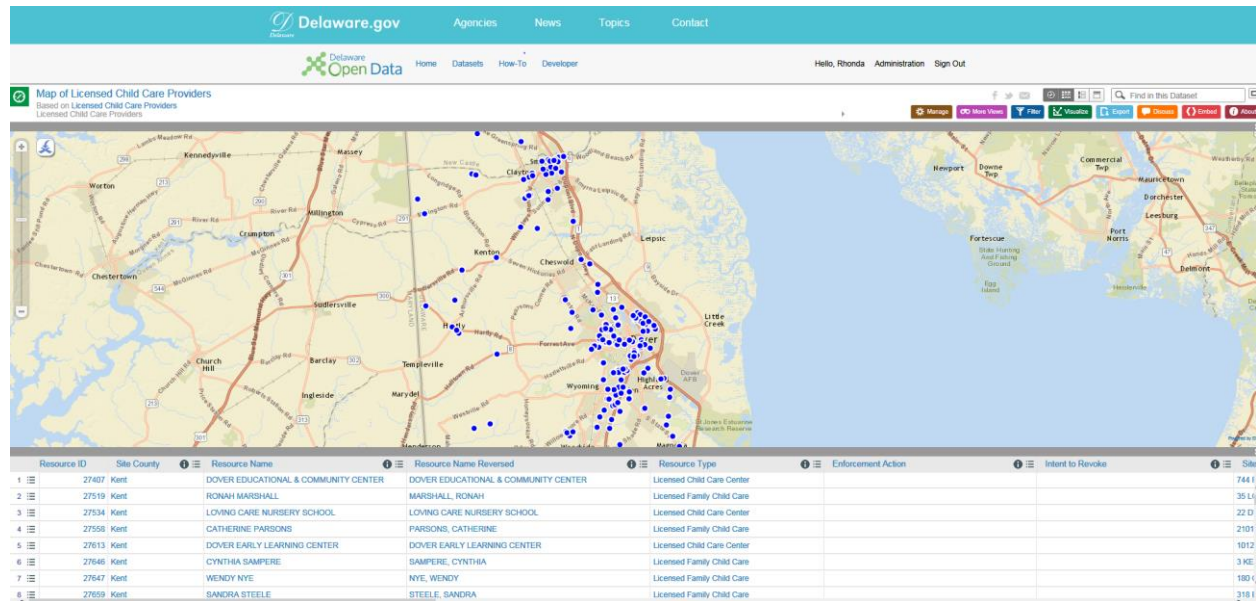

### Executive Order #57

Just as the above chart uses the Professional Licensee dataset, the below chart does too – this is a filtered view of the most frequent professional license categories.

The map below plots the locations of child care providers in the state. This could be filtered to show only child care providers with a specific STARS level and within a geographic area. Locations of child care providers are currently listed online in address form, but today there is not an interactive map. When the Open Data Portal is launched, users will benefit from having this view of the data showing child care locations.

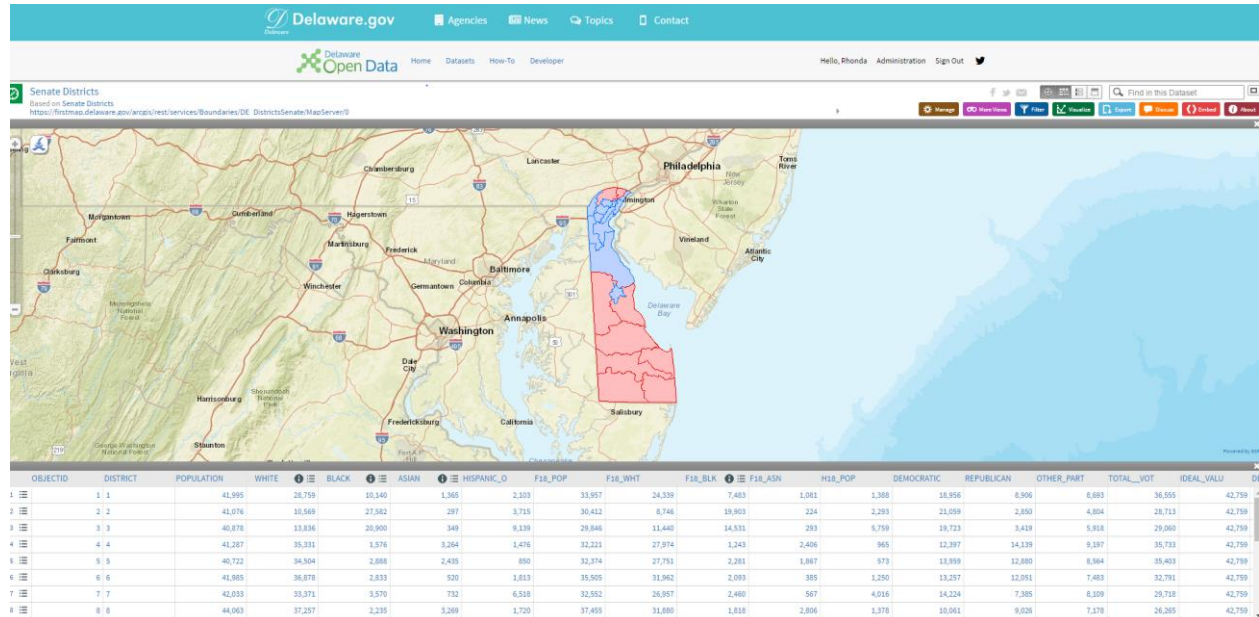

All data in the Open Data Portal is in machine-readable format and will be exportable or downloadable into several formats (.csv, .xml, etc.) that will allow the user to do further analysis of the data. Data is also accessible to application developers through a built-in application programming interface (API). Entrepreneurs and others in the private sector can use APIs to build new websites, aps, or other products utilizing portal data. There is a rich set of information and documentation to make it very simple for developers to understand how to utilize the data within the Open Data Portal.

FirstMap, <http://opendata.firstmap.delaware.gov/>, is an online Geographic Information System (GIS) using ESRI cloud software that publishes location based data in map format. FirstMap and the Open Data Portal will work together hand-in-hand. Map layers published in FirstMap will also be available in the Open Data Portal. End users of the Open Data Portal can display data on map layers that have been published from FirstMap. Users will see a centralized search in the Open Data Portal for all FirstMap map layers and datasets entered directly in the portal. Some examples of map layers that will be incorporated from FirstMap include legislative boundaries, municipal boundaries, bike trails, and Delaware nature preserves.

## Delaware Open Data Progress Report 7/31/16 Executive Order #57

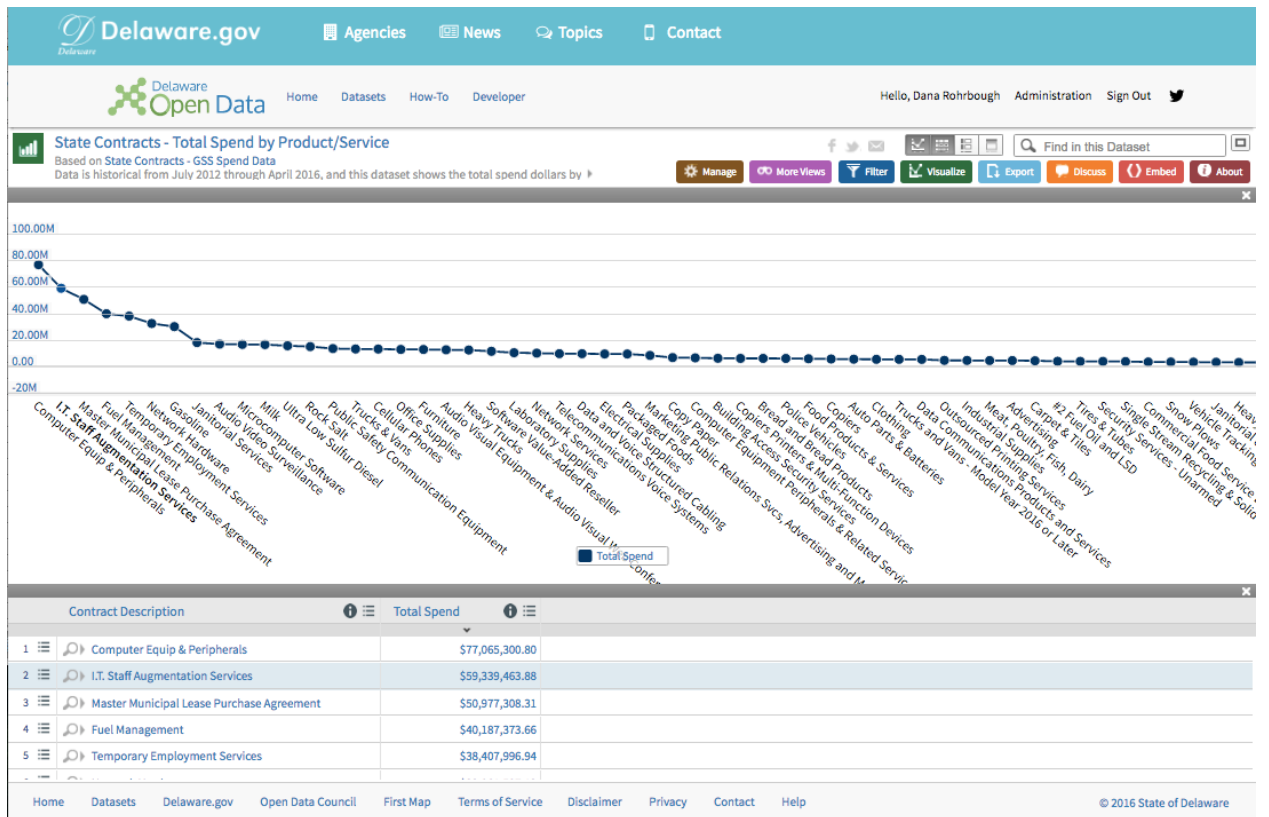

Below is an example of senatorial district boundaries. Other data can be overlaid on this map to show that data divided up by the senatorial district boundaries in a visual format.

The portal has the ability to mashup or combine multiple datasets for new analyses to be performed. Some planned examples of data that could be combined are drug treatment admissions and controlled substance licensees. This could identify hot spots that should be targeted.

Delaware Open Data Progress Report 7/31/16  
Executive Order #57

Further, the Open Data portal can show historical trends. Below is a chart that shows state spending on state contracts for goods and services combined over the last three years.

## V. DATA

Per the Executive Order, council members were required to submit a list of datasets to be included in the Open Data Portal. Fifty six datasets and forty eight maps were submitted for publishing in the portal. The full list was then prioritized by council members based upon agency priority, readiness to be published, and frequency of requests for this data. Thirty three datasets were selected to be made available with the launch of the Open Data Portal. Other agencies that are not represented on the Open Data Council have also submitted datasets to be included; such as DELJIS, Criminal Justice Council Statistical Analysis Center, the Department of Finance, and the Department of Agriculture.

| Description of data   | Dept./Agency | Proposed Category    | Agency Priority | Included in Launch? |
|---|--------------|----------------------|-----------------|---------------------|
| Toxics Release Inventory  | DNREC        | Energy & Environment | High            | Yes                 |
| Licensed Child Care Providers                                       | DSCYF        | Human Services       | High            | Yes                 |
| State Contracts/Usage   | OMB          | Government & Finance | High            | Yes                 |
| Office of Supplier Diversity Directory                              | OMB          | Economic Development | High            | Yes                 |
| Small Business Focus Directory                                      | OMB          | Economic Development | High            | Yes                 |
| Births  | DHSS         | Health               | High            | Yes                 |
| Deaths  | DHSS         | Health               | High            | Yes                 |
| Restaurant Inspections  | DHSS         | Health               | High            | Yes                 |
| Permitted Septic Systems  | DNREC        | Energy & Environment | High            | Yes                 |
| Septic System Inspections   | DNREC        | Energy & Environment | High            | Yes                 |
| Well Permits  | DNREC        | Energy & Environment | High            | Yes                 |
| Recent Environmental Releases                                       | DNREC        | Energy & Environment | High            | Yes                 |
| DNREC Environmental Violations                                      | DNREC        | Energy & Environment | High            | Yes                 |
| Air Quality Monitoring Network                                      | DNREC        | Energy & Environment | High            | Yes                 |
| Ozone Exceedances   | DNREC        | Energy & Environment | High            | Yes                 |
| Cancer incidence and mortality (age adjusted rates by census tract) | DHSS         | Health               | High            | Yes                 |
| Nursing Home Inspections  | DHSS         | Human Services       | High            | Yes                 |
| Medicaid Enrollment   | DHSS         | Human Services       | High            | Yes                 |
| Crime Map   | DELJIS       | Public Safety        | High            | Yes                 |
| Drug Treatment Admissions   | DHSS         | Human Services       | High            | Yes                 |
| Fisheries Catch Data  | DNREC        | Recreation           | High            | Yes                 |
| Population Data of clients served                                   | DSCYF        | Human Services       | High            | No                  |
| School Directory  | DOE          | Education            | High            | Yes                 |
| Student Demographic   | DOE          | Education            | High            | Yes                 |
| Student Performance   | DOE          | Education            | High            | Yes                 |
| Student Preparation   | DOE          | Education            | High            | Yes                 |
| Staff Demographic   | DOE          | Education            | High            | No                  |

Work is required to prepare each dataset for inclusion in the Open Data Portal. Metadata and a data dictionary must be prepared for each dataset to ensure that the consumer clearly understands what the data represents. This is necessary for the user to understand the data, helps avoid misinterpretation, and reduces questions regarding the data. Preparing this information for publication is a large task for agencies, but is necessary to get all datasets ready for the launch of the Open Data Portal.

In addition, after learning from other states, the Council prioritized keeping data current and fresh in the Open Data Portal. Datasets that are coming from state databases have been selected for automated updates. DTI is configuring automated data connections between the Portal and various databases, and this will prove to be instrumental to keeping data current. This configuration requires more time spent up front, but will pay great dividends once the Portal is launched.

## **VI. LAUNCH**

Work is ongoing to get datasets ready in order to launch the Portal. Once datasets are ready, the Council will organize a launch event with the Governor, CIO, and Secretary of State to officially announce the Open Data Portal to the public. The target public launch date is mid-September.

In order to prepare for the launch, the Council and the agencies must complete the following:

- Agencies need to send all high priority datasets to the Chair.
- Agencies must create and compile data dictionaries and metadata for each dataset.
- Agencies then must give the final sign off for data publishing, to approve the data for publication in the Open Data portal.

Cooperation is needed on these outstanding items to get the portal launched to the public.

## **VII. CONCLUSION**

The Open Data Council has made great progress in cooperation with state, community and private organizations. The Council has focused on getting the right information included in the portal in the most accurate and sustainable manner. This effort requires significant effort on the front end but has proven to increase transparency and reduce information requests in other government organizations. In addition to launching the portal this fall, the Council is also working to establish open data policies and is planning to begin facilitating agency data sharing initiatives as well.
